

# ABHISHEK TOMAR

Software Engineering Intern

Noida, India | +91 9720086959 | abhishektomar972008695@gmail.com | LinkedIn: abhishek-tomar-7aa29127b | GitHub: Abhishek-09-Tomar | LeetCode: Abhishek\_Tomar\_99

## SUMMARY

Software Engineering Intern candidate with strong problem-solving skills in C++ and Data Structures & Algorithms, along with a solid understanding of Python and the fundamentals of Machine Learning, Deep Learning, NLP, and RAG. Eager to apply core computer science knowledge to build efficient software solutions.

## TECHNICAL SKILLS

**Programming & DSA:** Python, C++, SQL, Data Structures and Algorithms, Problem Solving

**Data Science & Analytics:** NumPy, Pandas, Data Cleaning, Data Preprocessing, EDA, Feature Preparation, ML Workflows, Model Evaluation

**AI/ML & NLP:** OpenAI API, RAG Fundamentals, Prompt Engineering, NLP Fundamentals, Machine Learning Fundamentals

**Tools & Platforms:** API Integration, Git, GitHub, VS Code

**Soft Skills:** Adaptability, Collaboration

## EXPERIENCE

**Data Science Intern | Interns Elite**

07/2024 - 09/2024

Remote / India

- Processed datasets for 2 ML workflow projects using Python, NumPy, and Pandas, covering data cleaning, preprocessing, feature preparation, and exploratory data analysis.
- Built real-estate price prediction and spam mail detection workflows, converting raw data into model-ready features and evaluation-ready outputs.
- Applied validation and feature-preparation steps to improve dataset consistency and reduce manual cleanup during experimentation.

## PROJECTS

**AI Document Chatbot | [github.com/Abhishek-09-Tomar/ai-document-chatbot](https://github.com/Abhishek-09-Tomar/ai-document-chatbot)**

12/2025 - 01/2026

Tech: Python, Flask, OpenAI API, REST APIs, RAG-style Retrieval

- Engineered a Python/Flask document question-answering app where users upload files and receive context-aware AI responses grounded in document content.
- Designed a 4-stage retrieval pipeline for document ingestion, text processing, context retrieval, and prompt construction before OpenAI API calls.
- Improved answer reliability by organizing retrieved context before generation, reducing unsupported-response risk and improving answer relevance.
- Exposed REST API flows for file upload, text extraction, document search, and AI-powered response generation.

**Spam Mail Detection Using Machine Learning**

08/2024 - 09/2024 Tech:

Python, NumPy, Pandas, Scikit-learn, NLP, Machine Learning

- Built a machine learning-based spam mail classification system in Python, applying text preprocessing techniques such as tokenization, stop-word removal, and feature extraction on email datasets.
- Implemented and compared classification algorithms to distinguish spam from legitimate emails, evaluating model performance using accuracy, precision, and recall metrics.
- Cleaned and pre-processed raw email datasets using Pandas and NumPy, handling missing values and preparing structured, model-ready input.
- Improved detection reliability by tuning feature representation and model parameters, reducing misclassification of legitimate emails.

## EDUCATION

**Bachelor of Technology in Computer Science and Engineering**

2023 - Present

Galgotias University, Greater Noida, India | CGPA: 7.6 / 10.0 | Expected Graduation: July 2027

Relevant Coursework: DSA, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering, System Design, Data Analytics, Machine Learning, Deep Learning, Natural Language Processing

## CERTIFICATES

**Python** - Verification Link: [www.guvi.in/certificate?id=639C7J2bB1L61n07x7](https://www.guvi.in/certificate?id=639C7J2bB1L61n07x7)

**MySQL** - Verification Link: [www.guvi.in/certificate?id=7s9cZ319k5RY7276e1](https://www.guvi.in/certificate?id=7s9cZ319k5RY7276e1)

## ACHIEVEMENTS

- Solved DSA problems across various coding platforms using C++ across arrays, hashing, recursion, and trees.
- Built 2 projects combining AI/ML, retrieval-augmented generation, and REST API integration using Python.
